

Hadrurus

ARIZONENSIS

Hadrurus Arizonensis, otherwise known as Giant Desert Scorpions originate mainly from Arizona, preferring temperatures anywhere from 22-32C with a 50% humidity.

These large scorpions have been difficult for hobbyists to raise keep and breed due to their difficulty moulting in captivity.

Hadrurus Spadix

Hadrurus Spadix has its entire mesosoma dark brown/black in colour, covering every inch of the mesosoma.

Hadrurus Obscurus

Hadrurus Obscurus is similar to Spadix in that the majority of it's mesosoma is black but stops up to the median eyes on its carapace.

Hadrurus Pallidus

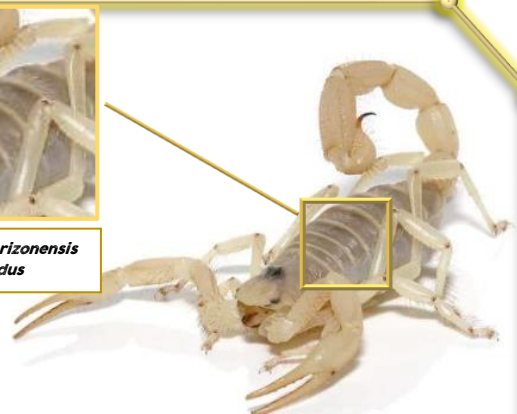

Hadrurus Pallidus has it's entire mesosome blonde in colour, the metasome always matches it's carapace in colour.

Hadrurus Arizonensis

Hadrurus Arizonensis Pallidus

Hadrurus Pectine Count:

Male: Pectinal teeth are longer. Pectinal tooth count for male is 35-41

Females: Pectinal teeth are shorter. Pectinal count for female is 30-31.
